## **ВОДНИ ПОМПИ**

### ***Self-priming pumps without and with booster unit***

#### ***WITHOUT BOOSTER UNIT***

*Annovi Reverberi's self-priming jet pumps range provides the ideal condition for the lush growth of the garden plants and grants a convenient service water supply for home and garden. It allows water recycling especially useful for fixed or mobile irrigation systems or to fill small pools or fountains, by drawing from alternative sources such as wells or basins. Thanks to the energy saving ON / OFF system, the pumps offer a sustainable and environment friendly solution.*

#### ***WITH BOOSTER UNIT***

*The self-priming pumps with pressure tank, provided by Annovi Reverberi, excel at supplying water for domestic clean water fixtures or for garden irrigation, maintaining a stable and constant pressure. The pumps can be integrated with domestic water supply systems, since their use of rainwater, drawn from tanks or wells, prevents the waste of drinking water. Thanks to the energy saving ON/OFF system, the pumps offer a sustainable and environment friendly solution.*

### ***Submersible pumps***

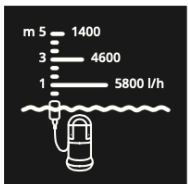

*Get rid of any water residue!  
Annovi Reverberi submersible pumps move large volumes of water in a short time, up to 16000 liters per hour. They can be used to pump out clean or dirty water. The innovative design allows the user to remove the water leaving only 5mm of residual water on the flat surface. The characteristic float switch allows the pumps to be started automatically whenever necessary.*
